

# Nourishing Europe's future through regenerative livestock feed

Local. Circular. Data-Driven.

## What is Nutrifeeds?

Nutrifeeds is a Horizon Europe research and innovation project that aims to revolutionize how animal feed is produced, sourced, and valued across Europe. By developing regenerative and circular feed solutions, the project contributes directly to the EU Farm to Fork Strategy, the Green Deal, and the transition toward a climate-neutral food system.

At its core, Nutrifeeds promotes a new vision for livestock nutrition, one that nourishes animals, restores ecosystems, and empowers local communities.

## Innovation Pilots

### Insect Upcycling Pilot

NUTRIFEEDS explores how black soldier fly larvae (BSFL) can convert low-value agri-food side-streams into high-quality protein ingredients for livestock feed.

### Targeted Fermentation Pilot

Through advanced fermentation techniques, NUTRIFEEDS increases the nutritional value and digestibility of plant-based feed ingredients.

### Silvopasture & Circular Farm Models:

NUTRIFEEDS tests silvopastoral systems that merge forestry and grazing, enhancing biodiversity, soil health, and carbon sequestration.
